

TCSI, Janya collaborate on contract for the Defense Intelligence Agency

Washington D.C., and Buffalo, NY – February 2, 2009 -- Total Computer Solutions Inc., (TCSI) was awarded a contract from the Defense Intelligence Agency (DIA) to provide advanced information capture, entity and relationship extraction, and content analysis services.

“We are proud to be selected to contribute to DIA’s important work to supply timely and accurate information to our soldiers, our planners, and our policy makers,” said Wayne Beal, President and CEO of TCSI. “TCSI will be providing a number of innovative data distillation capabilities which should provide our customer with faster, more accurate, and more complete information.”

A key component of the TCSI solution is the Semantex™ information discovery platform developed by Janya Inc. (a subcontractor to TCSI for this effort). The Semantex platform incorporates a hybrid model of information extraction, combining statistical, lexical and grammatical approaches, to detect entities, attributes, relationships and events. “We are pleased that Semantex has served the needs of TCSI and the DIA in this critical intelligence application” said Rohini Srihari, CEO of Janya Inc. By combining a number of data reduction technologies and techniques within a collaborative production environment TCSI dramatically increases overall throughput, efficiency and accuracy.

About TCSI

TCSI provides advanced techniques to help organizations make faster and more complete decisions. Our strengths include: high-volume content capture / harvest; deep Web and federated searching; entity and relationship extraction; data reduction and visualization (including machine translation); content management portals; high-speed document conversion, IT development and engineering; and, Information Assurance.
